PROFILE

Ruby on Rails backend engineer supporting federal healthcare enrollment systems. Sole backend engineer on HealthCare.gov's Enroll team, responsible for backend architecture, enterprise API integrations, and production reliability. Open-source contributor whose Puma instrumentation shipped in New Relic's official Ruby agent.

EXPERIENCE

Oddball [Full-time, Remote]

Software Engineer I

2025.06 - Present

- Sole backend engineer on the Enroll team for HealthCare.gov's enrollment application (Ruby on Rails, Puma, Solid Queue, PostgreSQL, AWS ECS, Terraform, New Relic), responsible for backend architecture, reliability, and delivery.
- Designed and shipped Puma server-statistics instrumentation in New Relic's official Ruby agent, resolving missing metrics in forked deployments; released in `newrelic_rpm` 10.7.0 (`newrelic-ruby-agent#3578`).
- Integrated CMS Marketplace/FFM APIs, strengthening timeout, retry, and failure handling and diagnosing submission timeouts that surfaced as generic consumer errors; hardened the JWT token-decode middleware authenticating API access.
- Migrated background processing from Que to Solid Queue and implemented queue-depth autoscaling using CloudWatch and Terraform across all six environments; recovered a stalled worker after database reboots with fail-fast restart and worker health monitoring.
- Leading a multi-version framework modernization from Rails 7.1 to 8.1, including Rack 3 and Ruby 4 upgrades, sequenced to land ahead of a federal code freeze.
- Automated database migrations across all six environments, adding `strong_migrations` checks and lock/statement timeouts to reduce deployment risk.
- Partnered with operations to identify a module load-order regression behind a fleet-wide 500 outage, and specified the boot-time guard that shipped to prevent recurrence.
- Joined the cross-contract security team as the only non-lead engineer, participating in security review across contract projects.

Associate Software Engineer

2024.06 - 2025.06

- Developed backend logic and RSpec coverage for Medicare enrollment transition handling, spanning nearly all of the project's 35 scenarios.
- Upgraded the application from Rails 7.0 to 7.1, including dependency upgrades, test framework migration, and ongoing CVE remediation across backend dependencies.
- Participated in three production incident responses via PagerDuty, coordinating with operations teams and CMS stakeholders on bridge calls.

- Planned and delivered a full K-6 music curriculum, coordinating schedules, budgets, and public performances across the school year.
- Secured Oklahoma Arts Council, local grant, and DonorsChoose funding for visiting performing artists and classroom instruments.

🛠️ SKILLS

Backend	Ruby on Rails / Ruby / REST API Design / PostgreSQL / Solid Queue / Que / Python
Frontend	JavaScript / TypeScript / React
Infrastructure & Delivery	AWS (ECS, S3, CloudWatch, Bedrock) / Terraform / Docker / Jenkins CI/CD / GitHub Actions / Akamai / Git/GitHub
Testing & Observability	RSpec / JMeter / New Relic / Splunk / LaunchDarkly

🎓 EDUCATION

Southwestern Oklahoma State University	2015 - 2019
Choral Education	🎓 Master's degree
Northwestern Oklahoma State University	2008 - 2013
Vocal Education	🎓 Bachelor's degree
